

Body Treatments

Welcome to the world of transformative body treatments at the Wellness Clinic. Our offerings are diverse and innovative, ranging from advanced radio frequency techniques to vaginal rejuvenation, laser hair removal, and intense pulse light therapy.

Evolve by InMode

Evolve is a hands-free, non-invasive body transforming treatment with RF energy heating and muscle stimulation. Its innovative design has multiple technologies, Tite, Tone, and Transform for customized body treatments.

Evoke by InMode

Evoke is a hands-free, non-invasive radiofrequency energy treatment that treats tissue on the cheeks, neck and jawline to reveal more defined facial features and improved appearance.

IPL Therapy (Intense Pulsed Light)

Intense Pulsed Light therapy, commonly known as IPL, is used to perform skin treatments for aesthetic and therapeutic purposes. IPL can treat sunspots, age spots, rosacea, and other red or brown blemishes. The light heats and destroys pigment cells, which then break down and are absorbed by the body.

LHR (Laser Hair Removal)

Laser hair removal is a popular option for people who want a more permanent solution for facial hair, body hair, stubble, and ingrown hairs. Laser hair removal uses laser energy to prevent a person's hair follicles from growing new hairs.

Skin Pen

SkinPen creates microscopic holes at a rate of 1600 per second. These wounds stimulate your skin, kicking its healing process into high gear. Best of all, SkinPen doesn't rely on heat or chemicals, so the results are natural and safe for all skin tones and types.

Morpheus 8

This innovative, FDA-approved treatment targets the deep layers of the skin to reduce wrinkles and build collagen. At the same time, beneficial heat from the RF energy tightens your skin. Because the RF energy goes so deep, you'll experience faster, more remarkable results with little downtime.

RHA Filler

Your skin naturally contains hyaluronic acid (HA), which provides moisture, volume, and structure that help it appear smooth and refreshed. Your skin produces less HA over time as we age. The RHA Collection uses a gentle manufacturing process to help preserve the natural structure of HA—allowing it to more closely resemble the HA in your skin—for clean beauty

Daxxify

DAXXIFY is FDA-approved to smooth moderate to severe lines by blocking nerve signals to the muscles, preventing them from contracting and causing wrinkles. It is the only long-lasting frown line treatment powered by a peptide with results that may last on average 6 months and up to 9 months for some.
